<b>Condition details</b>																
Shattered silk is present on one of the patches, and unidirectional loss can be found in several places. There are failing seams on the cover and as well as on the inner pillow. Creasing is present on one of the patches, and there are several areas of loss due to abrasion. Other damage includes frayed patch edges, and holes of various sizes throughout. Staining is visible on the inner pillowcase. There is evidence of past insect activity, including accretion and holes. There is also another accretion of unknown origin on the lower layer of the cover.
